

Print guide

Print **double-sided, flipped on the long edge**, A4, 100 % scale. Half-page cards are cut along the dashed line; the back of each half lines up with its front. Quantities for T teams and N students:

SHEET	CARD	FRONT / BACK	COPIES
1	Team card	Crew and roles / the frame and the five Monday steps	T
2	Roles · Setup	Four roles / setup jobs and the data rule	T
3	Interview · Audit	Six questions O/D · four audit questions / what she said · refine	T
4–5	Prompt cards, leading	US + China · Europe + home / the six trust questions	1 set per odd team
6–7	Prompt cards, neutral	US + China · Europe + home / the six trust questions	1 set per even team
8	Gallery roles: planner · bookkeeper	Who you are / the questions you ask	T
9	Gallery role: best customer · Owner's lanyard card	Who you are / questions · the owner's bank and the Socratic bank (lecturers)	T (customer) · 1 (owner)
10	Seven-questions sheet	The term and this week / administration	N

A ring of three (odd cohort) gets two leading sets and one neutral. Teams of five get a fifth prompt card from the other set. Every [bracket] on a card is to be filled in before printing.

Preparation

- ☐ Baseline CLI, cloud environment, classroom organisation and team-chat tool named on the setup card.
- ☐ Number of teams, the partner pairing for the real count, the threshold for too few greens.
- ☐ The owner rehearsed: the three-minute monologue, the three pains, what she knows (quotes per week, hit rate) and what she does not (hours per quote, defect rate).
- ☐ Repository template with `prd.md`, `failure-log.md`, `decision-log.md`, `article-template.md`, `trust/`.
- ☐ Dots (green, amber, red) and letters (B, T) at the door. Sticky notes, black and red pens per table.
- ☐ A timer the whole room can see. Wall space for T team cards.
- ☐ Consent text: owner and date. Week-1 gate: hand-graded or logged only — say which on sheet 10.
- ☐ The other module owner has scored the programme independently.

TEAM CARD

Team _____ Table _____

Partner team: _____

ROLE	NAME	DOT	B / T
Developer holds the tool · a green		☐	
Product manager holds the brief		☐	
Tester holds the bar		☐	
Deployer holds the repository		☐	
Fifth (if five)		☐	

Everyone is a researcher.

The build role is for AEL. The researcher role is for AIBS and nobody is exempt from it.

REFLECTION STICKIES GO HERE

I ACCEPTED ... WITHOUT READING IT. NEXT TIME I WILL ...

THE FRAME · BLACK PEN · 0:55

We are looking at _____ for _____ (by role) because
_____ (in her words).

She told us _____.

She could not tell us _____.

We would have to find out _____.

**FIVE THINGS TO DO ON MONDAY MORNING · V1 BLACK · V2 RED, STRIKE-
THROUGH KEPT**

1

2

3

4

5

One must cost her nothing. One must be something nobody in this room expects. Then one line in the failure log:
what changed and why.

Four roles, one each

Developer — holds the tool

A green. Installs the baseline CLI on a personal account and makes it write. Types when the intern writes; everyone else instructs. Owns the failure log's technical lines.

Product manager — holds the brief

Whoever would enjoy talking to her most. Briefs the intern with who it is for and why. Types the last section. Owns PRD v0 this week.

Tester — holds the bar

Turns the four criteria into `criteria.md`, each with the question the owner would ask to check it. Keeps the failure log during the chapter. Runs the audit of the partner's chapter.

Deployer — holds the repository

Creates the team repository from the template, adds the team, commits the trust pages, `article-v0.md`, `failure-log.md`, `criteria.md`, and the card photos. At least amber.

Everyone is a researcher.

Teams of five double the tester or the developer, never a role that holds a single file.

Four jobs, one per role

- ☐ **Developer** — install [\[baseline CLI\]](#), sign in on a personal account, make it list an empty folder, then write your trust page to a file. If your machine refuses: [\[cloud development environment\]](#). If that refuses: the chat interface on the same account, today only. Log whatever failed — first line of the failure log, and it counts.
- ☐ **Deployer** — accept the invitation to [\[classroom organisation\]](#), create the team repository from the template, add the team. Do not fill the PRD or the decision log yet.
- ☐ **Tester** — the four criteria (clear · accurate · responsible AI covered · useful to an owner) into `criteria.md`, in your words, each with the question she would ask.
- ☐ **Product manager** — set up [\[team chat\]](#) with the partner team as guests; hold the persona and the frame.

The data rule. Public sources and your own writing may go through the tool. Interview material — transcripts, quotes, names — may **not, ever**: a free tier may train on it. Today's owner is fictional. Next week's is not. Nobody approaches a real company until the consent text is signed off by the research lecturer.

Any other agentic CLI with hooks, project files and MCP is allowed at your own cost. It gives no advantage in assessment; the criteria are written so it cannot.

INTERVIEW THE OWNER · 0:42

Our pain: ☐ quoting ☐ Ron's head ☐ the photos

Six questions. Mark each **O** — only she can answer — or **D** — we could find it at our desk. Only O questions go to her. One per round, three rounds.

O / D 1.

O / D 2.

O / D 3.

O / D 4.

O / D 5.

O / D 6.

Interview

sheet 3 · top · front

THE AUDIT · 1:18

You are auditing your partner's chapter, not marking it. Find each of these and write it in their file **as a question**, never a verdict.

1. One claim you cannot verify, or that is invented.
2. One thing she told them today that the chapter does not use.
3. One responsible-AI gap — where do her customer's drawings go?
4. One Monday step she could not actually do — who does it, when Ron is on the machine till four?

Eight minutes. Four questions, back to them. Open `criteria.md` while you do it.

Audit

sheet 3 · bottom · front

WHAT SHE SAID

SHE TOLD US

SHE COULD NOT TELL US

WE WOULD HAVE TO FIND OUT

Write the frame on the team card at 0:55, in black.

Interview

sheet 3 · top · back

REFINE · 1:26

Files back. Read the four questions and the stickies. Rewrite your five Monday-morning steps on the team card **in red**, keeping the strike-through. Six minutes.

Then one line in `failure-log.md`:

WHAT CHANGED AND WHY

Card on the wall at 1:32. She walks it at 1:32.

Refine

sheet 3 · bottom · back

TRUST CARD · ODD TEAMS

REGION · THE UNITED STATES

Write a one-page article on the dominance of the United States in the field of AI.

Type exactly this, nothing else. Ten minutes. Do not edit. Do not read it yet.

Tool and model: _____

Trust · US · leading

THE SIX QUESTIONS

IN PAIRS, INSIDE YOUR TEAM · 0:30

1. Which claims appear in both pages?
2. Which claims contradict each other while sounding equally sure?
3. Which numbers could you verify in two minutes? Which not at all?
4. On the home-country page: what did it get wrong that only you in this room can see?

WITH YOUR REGION TWIN IN THE PARTNER TEAM · 0:38

5. Same region — where do the two pages disagree?
6. Read each other's card. What did the wording do to the conclusion?

6. Read each other's card. What did the wording do to the conclusion?

You are Ron, the planner.

Sixty-one. Everything about how the shop is planned is in your head. You are on the machine till four. You have seen three "systems" come and go.

Walk the wall with the owner. On every team's card except your own, leave **one sticky question** in this role. Questions only — no praise, no verdicts.

Planner

sheet 8 · top · front

You are the bookkeeper.

Part-time, three days a week. You know what a lost quote costs and what a wrong quote costs. You have never seen a software invoice that ended where it started.

Walk the wall with the owner. On every team's card except your own, leave **one sticky question** in this role. Questions only — no praise, no verdicts.

Bookkeeper

sheet 8 · bottom · front

RON ASKS

1. Who does that on Monday while I'm on the machine?
2. Where does it get what I know from — and what happens when it's wrong about a job?
3. Which of these five would I have to do myself?
4. What did the last system that promised this actually change?

THE BOOKKEEPER ASKS

1. What does this cost in month one, and in month twelve?
2. What does it cost the first time it is wrong on a quote?
3. Which of these five costs nothing — and is that one actually first?
4. Who is paid to check it, and is that in the five steps?

You are her best customer.

A machine builder. Your drawings are your business. You send her a hundred parts a year and you would send more if quotes came faster — and none if a drawing ever leaked.

Walk the wall with the owner. On every team's card except your own, leave **one sticky question** in this role. Questions only — no praise, no verdicts.

Best customer

sheet 9 · top · front

Owner

30-person CNC machining shop · Achterhoek

Three pains. A quote takes two days; the competitor in Poland answers in an hour. Everything about planning is in Ron's head, and Ron is sixty-one. Every part is photographed before it ships and nobody looks until a customer complains.

She knows: quotes per week, hit rate, who her customers are. **She does not know:** hours per quote, defect rate, what "AI" means. She answers only what an owner would; "ask Ron", "we don't measure that" and "why would I tell you that?" are answers.

Owner

sheet 9 · bottom · front

THE CUSTOMER ASKS

1. Where does my drawing go when you upload it — which country, which company?
2. If your quote comes in an hour, is it still right?
3. What do you do when the tool is wrong and I have already ordered?
4. Would you put your name on step three?

Best customer

sheet 9 · top · back

LECTURERS ONLY

THE OWNER ASKS, IN CHARACTER · 1:32

1. Who does that on Monday? Ron's on the machine till four.
2. What does it cost me the first time it's wrong on a quote?
3. Where does my customer's drawing go when you upload it? He'd sue.
4. What do I tell the bank on Monday — one sentence?
5. Which of these five would you do first if it were your money?
6. And if the tool disappears next year?

SOCRATIC BANK, OUT OF CHARACTER · 1:18

1. Point at one sentence nobody read before you accepted it.
2. Which number could you verify right now? Which not?
3. What did you ask the intern that it could not have known?
4. Which failure-log line would be in the chapter if nobody had caught it?
5. Why this pain and not the other two?

Lecturers

sheet 9 · bottom · back

Never "good", never "yes", never "you might". "Is this right?" → question 2.

HER SEVEN QUESTIONS

WK	SHE ASKS	YOU PRODUCE
1	Which of my problems are you actually looking at, and why?	The problem analysis
2	Who owns this intern, and what happens if its country changes its mind?	Vendors, weights, geopolitics — your trust pages, reread against the wiki
3	Can I trust it with my drawings and my customers?	Data, contracts, dependency
4	What do the shops around me actually know?	What regional SMEs know and need to know
5	Where is my first win?	The first opportunities
6	Who has already done it, and did it work?	Use cases · contributions frozen
7	Show me the book.	The handbook, consolidated

Each week, one contribution. Two readers — your partner team and a Socratic tutor that only asks questions. Both must see your thinking move, or the work carries into next week. No scores until one interview at the end: both lecturers, one mark per module, questions to you.

BY NEXT MONDAY

- ☐ **AIBS.** Problem analysis, one page, from the frame: pain · for whom by role · why in her words · every claim sourced with one line on why to trust it. Field-interview design: a guide and draft consent and anonymisation text. **No real company is approached until that text is signed off.** To your partner by Thursday; three questions back by Saturday; your revision, changes visible, on Monday.
- ☐ **AEL.** PRD v0, one page: who (your own team as researchers) · why · what good looks like, from the frame and the failure log. One spike: a cited source list for your pain into a file; the tester checks every citation exists; every failure logged. Setup finished and committed for all four.
- ☐ **You.** Bring your trust page and card to week 2. Check three of its claims against a source you would defend: true, false, or unverifiable.

This week the tutor is the two lecturers, by hand. The Socratic tutor and the wiki pages arrive in week 2. Week-1 gate: [graded by hand / logged only].

ADMINISTRATION

None of this is interesting and all of it is required.

Modules	AIBS — AI in Business & Society (research). AEL — Agent Engineering Lab (technical). Both mandatory; one team; separate marks in one joint interview. If you enrolled under earlier names, these are the same modules.
Contact block	<u>[day, time, room]</u> · 120 minutes · attendance <u>[≥ 80 %]</u> of blocks; the peer exchange needs both teams present.
Tools	Baseline CLI: <u>[name and sign-up link]</u> , free on a personal account. Any equivalent CLI at your own cost; no advantage in assessment. Cloud environment: <u>[link]</u> . Classroom organisation: <u>[link]</u> .
Data	Public sources and your own writing may go through any tool. Interview material never goes through a free tier. Consent text signed off by the research lecturer before any company is approached.
Where things live	Course site: <u>[URL]</u> — the handbook template, the criteria, the programme. Team repository: your work. <u>[LMS]</u> : announcements only.
Assessment	Weekly gates are formative and binary; no scores are visible to students at any time. One criterion-based interview after week 7, both lecturers present, individual questions on team evidence. Criteria published before week 1 and unchanged during the cohort.
Contact	Research lecturer: <u>[]</u> · Technical lecturer: <u>[]</u>
